

COMMENTARY

CMGH Is Growing!

We hope you have enjoyed the first four issues of *Cellular and Molecular Gastroenterology and Hepatology* (CMGH). This issue, our fifth, represents a milestone. With this issue we have published 60 articles, including 23 original contributions, 12 reviews, and 16 editorials. These articles are receiving substantial attention throughout the gastrointestinal, liver, and pancreas research communities and media outlets worldwide. Factors driving this attention include the high quality of published work, press releases, social media promotion, and indexing in Google Scholar. Additionally, CMGH currently deposits, on behalf of our authors, all National Institutes of Health (NIH)-funded articles into PubMed Central in accordance with the NIH Public Access Policy, resulting in these articles being searchable in PubMed. Yes, you read it correctly: NIH-funded articles in CMGH are searchable in PubMed!

Although these NIH-funded articles are readily found in PubMed, CMGH is not yet officially indexed by PubMed. This involves an application process and evaluation of scientific

merit that requires the journal to have been accessible for at least 6 months. We are, therefore, currently applying for indexing. If accepted, all previous issues will be included as well.

Furthermore, because CMGH is an open access journal, we are working to deposit all our articles into PubMed Central, not just those with NIH funding, to widen the reach of CMGH even farther. So congratulations to CMGH, and thanks to all of you for supporting this effort as authors, reviewers, and readers.

For the Board of Editors,
JERROLD R. TURNER, MD, PhD, AGAF
Editor-in-Chief
